PETER JOSHUA E. DELORIA

Quality Analyst / QA Engineer

Pasig City • peterjoshuadeloria@gmail.com • github.com/Pjdell • pjdell.github.io/Peter-portfolio • 09153981611

PROFESSIONAL SUMMARY

Entry-level QA Engineer and BS IT graduate with hands-on experience in manual functional, negative, regression, system, exploratory, and UAT testing across three web application projects. Experienced in test case design, defect reporting, and retesting within Agile teams, with working knowledge of SDLC/STLC, and Postman. Full-stack background (React, PHP, PostgreSQL) supports clear communication with developers.

EDUCATION

BS Information Technology – Software Engineering **2022 – 2026**
Trinity University of Asia, Quezon City
Magna Cum Laude • Dean's Lister • Pasig City Scholar

WORK EXPERIENCE

QA Intern **February 2026 – April 2026**
International Academy Manila

- Tested a centralized school portal (React.js, PHP/PostgreSQL) serving students, faculty, and administrators, covering features across multiple school processes in one system.
- Performed manual functional and negative testing on application features, validating expected results, testing invalid inputs and form validation, identifying bugs, and retesting functionality after fixes.

PROJECTS

Workforce Allocation Optimizer **2026**
Personal Project

- Built a full-stack allocation system (React.js, Tailwind CSS, Laravel/PHP, PostgreSQL) to practice end-to-end QA on a multi-module application.
- Conducted exploratory testing on each module, using varied inputs to verify allocation logic and retesting after changes to confirm fixes.

School Portal **2026**
International Academy Manila

- Executed manual functional and negative testing across a multi-role portal (students, faculty, admin), validating expected results, invalid inputs, and form validation.
- Performed unit and system integration testing to verify that individual components and connected modules (frontend, PHP backend, PostgreSQL database) worked together correctly; identified and reported bugs, then retested after fixes.

Trinity University of Asia Marketplace **2025**
Capstone Project

- Built a React.js marketplace (Firebase authentication and realtime communication) for students and vendors, which became the system under test for a full QA cycle.
- Created and documented 72 manual test cases covering system, functional, negative, regression, and UAT testing; logged defects and retested after fixes. Also, worked with Agile methodology.

TECHNICAL SKILLS

Testing & QA: Manual Testing, Functional, Negative, Regression, System, Exploratory, UAT, SIT, Test Case Design, Defect Reporting, Agile, Postman (API Testing), SDLC/STLC Fundamentals
Databases: MySQL, PostgreSQL, Firebase Realtime Database
Version Control/Documentation Tools: Git, GitHub, VS Code, MS Word, MS Excel
Languages: JavaScript (ES6+), PHP, HTML5, CSS3
Frameworks & Libraries: React.js, Laravel, Tailwind CSS
APIs & Integration: REST APIs, Firebase Authentication
Design: Figma (wireframing, prototyping, design systems)

CERTIFICATIONS

Introduction to Software Testing **Online Certification**
Relevant software testing principles, testing levels, testing tools, and testing techniques.
