

PETER JOSHUA E. DELORIA

Frontend Developer · React.js · UI/UX

Pasig City | peterjoshuadeloria@gmail.com | github.com/Pjdell | 09153981611

PROFESSIONAL SUMMARY

Fresh BS Information Technology graduate with hands-on experience building responsive React.js web applications. Proven ability to deliver end-to-end projects — from Figma prototyping to PHP/PostgreSQL backend integration. Seeking a frontend or full-stack developer role where I can contribute to production-grade web products.

PROFESSIONAL EXPERIENCE

Frontend Developer Intern | International Academy Manila | February 2026 – April 2026

- Built a full school portal from Figma prototype to production using React.js, HTML, and CSS; implemented PHP + PostgreSQL backend and ensured cross-browser, mobile-responsive delivery.
- Redesigned navigation architecture for the organization's WordPress site, reducing menu depth and improving content discoverability for students and staff.
- Collaborated with stakeholders on UI/UX requirements, translating feedback into iterative Figma mockups before development — cutting revision cycles.

PROJECTS

TrustRide – eGovPH Hackathon 2026

- Designed and pitched a Verification-as-a-Service API layer for ride-hailing platforms, integrating three eGovPH endpoints: identity verification (PhilSys/NationalID eVerify + Face Liveness), one-tap SOS with GPS-triggered eMessage alerts to emergency contacts, and tamper-evident incident reporting anchored to eGovChain.
- Architected the solution as a plug-in API (Get Verified, SOS, Report to Authorities) so partner apps require zero direct government integration — modeled on Stripe/Cloudflare's developer-first onboarding approach.

School Portal – International Academy Manila

- Developed a multi-role portal (students, faculty, admin) using React.js frontend and PHP/PostgreSQL backend; enforced component-based architecture and Git branching workflow across the team.
- Achieved full mobile responsiveness via CSS Flexbox/Grid; collaborated on design system in Figma to maintain visual consistency across 10+ components.

Trinity University of Asia Marketplace

- Designed and developed the frontend using React.js, HTML, and CSS; collaborated on UI/UX with Figma and integrated Firebase for real-time communication and authentication.
- Improved user engagement by enabling instant messaging and seamless browsing, enhancing the marketplace experience for students and vendors.

Web-Based Garbage Truck Tracking System · Personal Project

- Developed a real-time tracking system using React.js and PHP, integrating OpenStreetMap API and React Leaflet for live garbage truck location monitoring.
- Enhanced community waste management efficiency and transparency by enabling users to monitor garbage trucks within their area.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), PHP, HTML5, CSS3

Frameworks & Libraries: React.js, React Leaflet, React Router

Databases: MySQL, PostgreSQL, Firebase Realtime Database

APIs & Integration: REST APIs, OpenStreetMap API, Firebase Authentication, PhilSys eVerify

Dev Tools: Git, GitHub, npm, VS Code

Design: Figma (wireframing, prototyping, design systems)

EDUCATION

BS Information Technology – Software Engineering · Magna Cum Laude

Trinity University of Asia, Quezon City | 2022 – 2026 | Dean's Lister | Pasig City Scholar
